

Word River

An add-on for Story Builder

Story Builder is an app created for teachers and researchers to improve children's reading and writing skills as well as promote their creativity. The app uses a drag and drop system where the child can drag the words they want to use and drop them into their newly created sentences.

Word Rivers' purpose is to assist the teachers and researchers manage their learners and what words they are using.

The app is used to help...

- Create context packs and wordlists
- Add learners to your profile
- Assign your learners context packs

Learners

As an Admin, you can create and keep track of the learners you have. You can see which context packs, wordlists and words your learner will have access to in Story Builder. You can also toggle any of the wordlists in order to assign or unassign them to your student. Unassigning and assigning wordlists will also give the user an updated view of what words will be available to your learner.

a and away down for in n

Context Packs

- Context packs are made up of a number of wordlists that usually have a theme and many words in them. The words are separated by which part of speech they are a part of
- In the context pack itself, Admin can change, add, or delete any words or wordlists.
- A user can also edit a context pack or wordlist, but only if they created it. That way if you made a mistake when making the wordlist, there is a way to fix it.
